

# MAGNUM IT™

## 2 INCH COMMERCIAL INDUSTRIAL WATER SOFTENER VALVE

### TOP MOUNTED IN WATER KING BAYOU (BF) SERIES SOFTENERS AND FILTERS

Developed in the late 1990's, the Magnum IT™ is a major innovation in five cycle valves. The combination of modern materials and sophisticated electronic controls mean the system will be reliable and efficient. The Magnum IT™ was specifically designed to work effectively as a filtration valve. The backwash has larger ports than other valves on the market allowing higher backwash flow rates as required in filters.

#### FEATURES

- Lightweight corrosion resistant Noryl® construction allows for easy installation and long service life. Noryl\* Construction – 23.3 lbs (10.6 kg)
- Full size porting on all main flow paths permits high service flow and backwash rates for both softening and filtering.
- Reliable face seal design eliminates piston scoring.
- Universal adapters fit virtually any commercial application around the world. Union Disconnects Provided on Valve.
- No hard water bypass option can be factory ordered or added in the field
- Modular cartridge design means any thing you need to change, clean or service is accessible from the front of the valve.
- High backwash flow rates for filter service. Full 1 1/2-Inch Drain Line Porting

## CAT330.2

- Versatile Electronic, Timeclock and Impulse Controls
- Twin Alternating Control Systems – Great Value
- Parallel Control Capabilities
- Proven Technology – Superior Performance
